

VOD - Vodafone - 100.75

Recent strength has brought VOD up to challenge important resistance at 99/101. At this stage it is still way too early to question the bearish overall chart configuration and ultimately our medium / longer term objectives of 74/72 and then 55/52 still seem within reach. Nevertheless, clearance of 101 on a closing basis would signal completion of a small, short term base pattern and make the stock look fairly well positioned to extend its recovery up to 113/118 in the near term. Despite the bullish near term implications of a close above 101, clearance of both 113/118 and the next resistance at 124/127 would be needed before the longer term bearish chart structure becomes questionable. Initial minor support stands at 91. A close beneath 91 would warn that the the recovery is faltering.
